An introduction to KGM Fire and Security Distribution.

KGM Fire & Security Distribution Ltd is now one of the leading fire and security distributors in the UK.

We are an experienced and knowledgeable customer focused team that consistently strives to deliver service above and beyond our customer's expectations.

Formed as a family business the company was established in December 1999 as a single manufacturer distributor. By working alongside other manufacturers the business portfolio grew quickly and soon was offering a wider range of products.

We currently stock multiple brands of manufactured products and have partnerships with companies such as Advanced, Morley, Kentec, Apollo, Hochiki, Prysmian FP, HIK Vision, Paxton, Texecom and many more.

Our high stock levels enables us to ensure that the majority of equipment is available from our early-opening trade counter and same day dispatch service.

Focused on customer service and with our 'can do' attitude KGM Fire & Security Distribution Ltd should be your first port of call.

AudioLINK Data Extraction Technology – Real Time Facts… Real Time Action

Award winning AudioLINK technology makes it easy to get real time data directly from smoke alarms and Carbon Monoxide alarms – saving time, money and lives. All you need is an AudioLINK enabled alarm, a smartphone or tablet and the free AudioLINK app.

- Extraction can be done on-site without having to remove the alarm – ensuring continued detection
- The simple to read report is generated straight away – giving details of any incidents immediately
- Data can be extracted for AudioLINK alarms again and again
- Information is stored for the life of the alarm enabling historic information to be retained
- The Alarm Status Report provides evidence required for maintenance of records – required for Private Landlords renting out properties in England.
- The Report can be emailed to form part of a properties record

Conventional Fire Alarm Systems

C-TEC's award-winning CFP conventional fire panels are LPCB certified to the latest revisions of EN54 parts 2 and 4 and offers an array of user and installer-friendly features. Supplied in an attractive flush or surface mountable plastic enclosure, 2, 4 and 8 zone versions are available, each featuring four conventional sounder circuits, class change and alert inputs, on-board fire and fault relays and combined keypad/key-switch entry.

CFP TWO-WIRE ALARMSENSE FIRE PANEL

LPCB certified to EN54-2/4, C-TEC's CFP two-wire AlarmSense fire panel is designed to work with Apollo's AlarmSense range of detectors, call points, sounders and visual indicators. The CFP Alarmsense panel includes four conventional sounder circuits, class change & alert inputs and on-board fire & fault relays. A wide range of engineering functions are also provided including selectable zone delays, coincidence and non-latching zone facilities.

Part No.	Description	List Price
CFP702-2	CFP Alarmsense 2 Zone 2-wire Control Panel	£215.40
CFP704-2	CFP Alarmsense 4 zone 2-wire Control Panel	£271.60
CFP708-2	CFP Alarmsense 8 zone 2-wire Control Panel	£326.70
CFP760	CFP 8 Zone Repeater Panel	£227.40
CFP761	CFP Network Driver Card	£76.00

CFP STANDARD 2-8 ZONE CONVENTIONAL FIRE PANELS

A powerful conventional fire alarm panel offering an array of user and installer friendly features. A wide range of engineering functions Including zone test, coincidence, zone delay & non-latching zones. Four conventional sounder circuits, two on-board relay outputs, two open-collector outputs, class change and alert inputs.

Part No.	Description	List Price
CFP702-4	CFP Standard 2 Zone Panel, LPCP Approved	£155.60
CFP704-4	CFP Standard 4 Zone Panel, LPCP Approved	£179.50

Conventional Fire Alarm Panels

Founded 30 years ago Kentec Electronics has worked closely with their customers and end users enabling it to become a world leading life safety control systems manufacturer. The Kentec name has become synonymous with world class products, great service and excellent support. Based in the UK, Kentec is a truly global supplier, exporting control equipment to over 80 countries worldwide and in many different languages.

SIGMA CP – FOUR WIRE (ACTIVE EOL)

The Sigma CP range of conventional fire control panels are high specification, fully featured control units designed for the most demanding conventional fire detection and alarm system applications. The KL1 range is supplied with Line Continuity Monitoring Units (LCMU's) to meet the requirements that if a detector is removed any MCP's fitted to the system will still operate.

Part No.	Description	List Price
KL11020 M2	Sigma CP 2 Zone Conventional Control Panel Surface Mount with LCMU Included	£251.10
KL11040 M2	Sigma CP 4 Zone Conventional Control Panel Surface Mount with LCMU Included	£303.90
KL11080 M2	Sigma CP 8 Zone Conventional Control Panel Surface Mount with LCMU Included	£356.70

SIGMA CP – TWO WIRE

The Sigma T11 Twin wire range allows sounders, beacons, detectors and call points within one zone to run on the same pair of cables. Wiring sounders to the detection circuits eliminates the need to install sounder circuit cables and also offers the ability to provide zoned or two stage sounder operation. (T series only)

Part No.	Description	List Price
T11020 M2	Sigma CP 2 Zone 2-wire Control Panel Surface Mount	£276.90
T11040 M2	Sigma CP 4 Zone 2-wire Control Panel Surface Mount	£315.50
T11080 M2	Sigma CP 8 Zone 2-wire Control Panel Surface Mount	£361.20

SIGMA CP-A ALARMSENSE

The Sigma CP-A Alarmsense range consists of 2, 4 and 8 zone fire alarm panels. The Alarmsense system enables all devices in a given zone to be wired to the same pair of cables thus greatly reducing the cabling and installation requirements and hence costs.
The Alarmsense range of devices includes smoke and heat detectors, call points, base sounders, sounder beacons and relay units.

Part No.	Description	List Price
KA11020 M2	Sigma CP-A Alarmsense 2 Zone Control Panel Surface Mount	£279.40
KA11040 M2	Sigma CP-A Alarmsense 4 Zone Control Panel Surface Mount	£318.10
KA11080 M2	Sigma CP-A Alarmsense 8 Zone Control Panel Surface Mount	£364.40

SIGMA CP-R REPEATER

The Sigma CP-R Repeater is compatible with all Sigma CP control panels which have operating software version V2.0 or above.
Repeaters are available with 2, 4 or 8 zones and in mains powered (K versions) or 24V powered (E versions).

Part No.	Description	List Price
E01020 L2	Sigma CP-R 2 Zone Repeater Panel 24V Surface Mount	£170.60
E01040 L2	Sigma CP-R 4 Zone Repeater Panel 24V Surface Mount	£192.50
E01080 L2	Sigma CP-R 8 Zone Repeater Panel 24V Surface Mount	£253.70
K01020 M2	Sigma CP-R 2 Zone Repeater Panel 230V Surface Mount	£268.50
K01040 M2	Sigma CP-R 4 Zone Repeater Panel 230V Surface Mount	£289.70
K01080 M2	Sigma CP-R 8 Zone Repeater Panel 230V Surface Mount	£351.50

Conventional Fire Alarm Panels

Morley-IAS are one of the world's leading designers of fire alarm control panels and associated equipment for professional fire alarm installers. Continually investing in marketing, research and development, ensuring that their products keep pace with leading edge technology, current legislation and market requirements.

HORIZON CONTROL PANELS

The Horizon series of conventional control panels has been developed to provide a simple and reliable solution to the demands of today's fire detection solutions. The Horizon range has been designed with both installer and end users requirements in mind. For installers, Horizon offers an out of the box and on the wall solution. A combination of quick installation, an enhanced feature set and advanced programming allows installers to quickly and simply meet the demands of the user.

ALARMSENSE

Two-wire AlarmSense has been developed to make the design and installation of a fire detection and alarm system easier and more economic for small to medium sized buildings. The range also allows an existing system to be extended or modified if necessary. This flexibility makes AlarmSense an excellent choice for use in Houses in Multiple Occupation (HMO's) and other similar applications.

ORBIS

The advanced Orbis range of conventional detectors has been developed with sophisticated technology previously only found in intelligent detectors. With modern styling the range incorporates a mounting base which saves installation time.

Part No.	Description	List Price
ORB-OP-12001-APO	Orbis Optical Detector	£21.50
ORB-OH-13001-APO	Orbis Multisensor Detector	£28.74
ORB-HT-11166-APO	Orbis Class A1S Heat Detector (57°C)	£18.28
ORB-HT-11001-APO	Orbis Class A1R Heat Detector (57°C)	£18.28
ORB-HT-11002-APO	Orbis Class A2S Heat Detector (57°C)	£17.78
ORB-HT-11003-APO	Orbis Class BR Heat Detector (75°C)	£19.36
ORB-HT-11004-APO	Orbis Class BS Heat Detector (75°C)	£18.28
ORB-HT-11005-APO	Orbis Class CR Heat Detector (90°C)	£19.36
ORB-HT-11006-APO	Orbis Class CS Heat Detector (90°C)	£19.36
ORB-MB-00001-APO	Orbis TimeSaver Base	£4.98
ORB-DB-00003-APO	Orbis TimeSaver Diode Base	£4.38
ORB-BA-10008-APO	S65 to Orbis Base Adaptor	£7.76

Conventional Fire Alarm Devices

Hochiki Europe at present builds in excess of 500,000 fire detection products per year. By employing the latest manufacturing techniques and rigorous quality control to ISO 9001 and Environmental Management to ISO14001, Hochiki Europe ensures every product installed will continue to enhance Hochiki's name for long-term reliable fire detection.

CDX DETECTORS

Hochiki's CDX range offers one of the most extensive product portfolios available, providing solutions for most conventional fire detection applications as well as security systems, due to its wide operating voltage range (9.5~30 V dc).

Part No.	Description	List Price
SOC-E3N	Photoelectric Smoke Detector	£19.40 *
DCD-AE3	Combined Heat Detector 60 degree	£17.00 *
DCD-CE3	Combined Heat Detector 90 degree	£17.00 *
DFJ-AE3	Fixed Temperature Heat Detector 60 Degree	£17.00 *
DFJ-CE3	Fixed Temperature Heat Detector 90 Degree	£17.00 *
DFG-60BLKJ	Waterproof Heat Detector 60 Degree (no base required)	£67.50

Addressable Fire Alarm Panels

The ***MX-4000 series*** of analogue addressable fire alarm control panels were the first panels to receive EN54 approval from the British Standards Institute (BSI) and proudly bear the internationally recognised quality Kite Mark. The full range, from 1 to 8 loops, has been approved for use with Apollo, Argus Vega, Hochiki and Nittan devices.
An extensive range of peripherals is available for the MX-4000, including input / output modules, printers and a variety of graphical indication units, together with easy to use software for programming, diagnostics and control.

Addressable Fire Alarm Panels

TouchControl is a 10", high-resolution touch screen Remote Control Terminal with active maps and zone plans. It is a fire panel and network node in its own right and works on Advanced's standard and fault tolerant networks. It is compatible with the MxPro and Axis EN fire panels. Zone information is presented via both the unit's colour coded, easy to-navigate interface and the active maps that are easily configured using the Dynamix Tools Map App.

AlarmCalm is fast, easy to use and simple to configure. It can scale from small installations to large sites with complicated cause and effect. Using Alarm Verification and Investigation Delay Technology, AlarmCalm allows additional time to respond, verify or investigate an alarm before the fire system goes into full alarm state. AlarmCalm uses Advanced's new Building Area concept which allows alarm management strategy within a building to be easily managed.

Lifeline is designed to quickly and effectively meet fire system radio paging requirements. Like all Advanced panels it's designed to offer more, to be easy to install and operate. LifeLine can operate from any stand alone conventional or addressable panel or across a large addressable network and is quickly integrated via an ESPA card (for detailed fire paging) or a simple relay connection (for hearing impaired alerts).
LifeLine runs a variable power, 2W transmitter, optimising power usage and delivering precise coverage, even across complicated buildings and sites. Whatever paging solution you access from your Lifeline panel - and you can run all three at once - set up is simple and quick.

The Addressable Matrix system uses flexible, fibre optic light guides to illuminate areas on a floor plan, laid over a high-resolution grid.

This unique system dispenses completely with wiring and enables indicators to be moved, removed or added on site without the need for any wiring.
Ideal for buildings such as hospitals where the building layout may evolve over a period. As the building changes, so too can Syncro Matrix, with very little cost or disruption.
The addressable Matrix can be supplied with or without common LEDs and controls. Optional LEDs indicate Power On, Fire, Fault and Disablement and optional controls are for Alarm Silence, Buzzer Silence, Lamp Test and Reset.
It provides a clear, geographical indication of the fire alarm or other system activation enabling speedy identification of the source of an alarm or other events.

Addressable Fire Alarm Panels

The ethos of Morley-IAS is to supply products approved to meet local legislation. In the UK, all of Morley IAS's fire detection and alarm control panels are designed to meet EN54 Part 2 and Part 4 standards and are approved by the LPCB to ensure compliance. The carefully planned evolution of their products over many years ensures that they can provide a panel to maintain or extend existing Morley-IAS fire systems, and a system purchased today meets not only your existing needs but can easily grow to satisfy the requirements of tomorrow.

DX CONNEXION RANGE

The DX Connexion panel is ideally suited for use in the protection of small to medium sized buildings. All in all, a compact, high performance, feature rich, economical fire alarm control panel designed to help both the installer and the end user. The DX Connexion is an enhancement of the Morley-IAS Dimension panel range, connecting the traditional Morley-IAS qualities of reliability, flexibility and value with advanced features and intuitive functionality.

Addressable Fire Alarm Systems

The Eaton Cooper CF2000GCPD panel is an entry level intelligent addressable control panel which can be configured for either 1 or 2 loop operation. It serves as the optimum solution for buildings that require a simple to use addressable fire system with a single, non-networked panel.

This intelligent addressable control panel has an LCD display which provides a simple yet comprehensive, menu-driven, end user interface.

The CF2000GCPD's ability to support Eaton's cause and effect programming and a wide range of user controllable functions makes the panel suitable for a varied range of projects from small warehouses to small/medium office developments as well as many small industrial applications.

As with all Eaton Cooper intelligent addressable panels, the CF2000GCPD uses "spur tolerant" soft addressing to minimise installation time and remove potential for errors often associated with many forms of manual addressing

Addressable Fire Alarm Devices

Hochiki Europe at present builds in excess of 500,000 fire detection products per year.
The Enhanced Systems Protocol (ESP) analogue addressable device range is based on proven RS232 serial communications technology with optimised voltage and current levels for transiting and receiving data at 24V. A number of control panel manufactures produce panels suitable for use with Hochiki ESP protocol devices.

Radio Fire Alarm System

Zerio Plus

As the longest standing radio fire alarm company in the world, with over 25 years experience, Electro-Detectors manufacture the most comprehensive range of wireless detection equipment available in the UK today. Over the last few decades, radio fire systems have dramatically increased in reliability whilst reducing in both size and price. Todays' systems, from Electro Detectors, boast a long battery life and are as reliable as hardwired systems.

ZERIO PLUS CONTROL PANELS

The EN54 Certified Zerio Plus Radio Fire Alarm System has been designed to be engineer friendly. It is based on the highly regarded Zerio system that has been manufactured for over half a decade. With all of the popular features of its popular predecessor, many new features have been added to enable the system to be even more user friendly with enhanced options to help the engineers install with the minimum of inconvenience.

Voice System

The Fire-Cryer Plus voice enhanced sounder has been developed to counteract the ever-increasing problem of audible alarms being ignored. It eliminates any potential confusion by combining the normal sounder signal with a clear and unambiguous voice message. Fire-Cryer Plus products require no special wiring and can be retrofitted to existing installations. They are fully synchronised and have an exceptionally low current consumption allowing simple replacement of existing sounders and bells.

PA/VA System

VX-3000 SERIES HIGHLY INTEGRATED VOICE ALARM & PUBLIC ADDRESS SYSTEM

The issue of security is more important than ever. Our VX-3000 Series is a reliable and energy-saving voice alarm system that combines all important functions for VA/PA in one unit frame. The limited number of components makes the design and installation much easier, as well as saving space and reducing cable complexity. This enables rapid system configuration and makes the VX-3000 a cost effective system.

Thanks to its flexible and scalable system architecture the VX-3000 system can be used for both small and large applications, with up to 256 remote microphones and 128 audio sources.

System Features

- Compact: All functions, all inputs and outputs in one unit
- Cost effective: Easy system configuration thanks to a small number of system components
- Flexible: Broadcast of many different audio signals simultaneously, flexible speaker driving from 1 zone per amplifier up to 64 zones per amplifier
- Scalable: up to 320 remote microphones
- Light-weight: Modern supply switching technology and digital amplifiers
- 1024 audio messages
- Energy saving: Standby mode for low power consumption during battery backup reduces the required battery capacity
- Decentralized: IP Network based
- Advanced ambient noise control (ANC)
- Masterless system provides high security if one line fails

Beam & Flame Detection

FIRERAY Optical Beam Smoke Detectors are an efficient and economical way of providing “wide area” smoke detection. They are usually used in situations where it is impractical, inappropriate or not cost effective (installation, wiring and maintenance) to use traditional point-type detectors and they also enable coverage of a large area at minimal cost.

FIRERAY 5000

The Fireray® 5000 motorised reflective, auto aligning infrared optical beam smoke detector can be installed with up to two detector heads per system, thus saving on installation time and costs. In addition, each system controller houses two pairs of fire and fault relays, one per detector.

Part No.	Description	List Price
5000-101	FIRERAY 5000 Self Aligning Beam System 50m	£562.50
5000-102	FIRERAY 5000 Self Aligning Beam System 100m	£685.00
5000-002	FIRERAY 5000 Single Detector Pack 50m	£447.50
5000-039	FIRERAY 5000 Single Detector Pack 100m	£580.00
5000-004	FIRERAY 5000 Long Range Kit	£127.50

FIRERAY 3000

The Fireray® 3000 End to End Infrared Optical Beam Smoke Detector (OBSD) has been designed using the latest optical technology, incorporating modern industrial, electronic and software techniques. The system allows for two detectors per system controller with a range of 5 to 120 metres, configurable per set of detectors.

Part No.	Description	List Price
3000-101	FIRERAY 3000 Beam System 5 - 120m	£767.50
3000-015	FIRERAY 3000 Additional transmitter and Receiver Head Set	£637.50

FIRERAY ONE

The Fireray One is a standalone reflective beam detector with auto-alignment, building movement tracking and light cancellation technology, with an operating range of up to 50m or 120m with the Fireray long range kit.

Part No.	Description	List Price
6010-100	FIRERAY One Beam Detector	£482.50
1010-000	FIRERAY Long Range Kit	£127.50

Flame detection across the spectrum

TALENTUM IR & UV FLAME DETECTORS

All 3 main types of Talentum Flame Detectors, IR2, IR3 and UV/IR2 have similar performance when it comes to detecting flames, but each has its own ‘specialist’ use for which it is best suited. Each type of Flame Detector can detector a flame from any source apart from Magnesium and Subpar which can be detected with special versions of the Flame Detectors. The Flame Detectors have a Fire and a Fault relay and need a flickering flame to activate.

Part No.	Description	List Price
16581	Talentum Dual IR (IR2)	£1885.00
16571	Talentum Dual IR (IR2) Intrinsically Safe	£2152.50

Beam Detection

thefirebeam™

Two main attributes make The Fire Beam stand out from the crowd. A motorised beam head that continually self-aligns, and a low level controller from which all major functions can be performed.
By utilising motors within the beam head The Fire Beam can make commissioning a safer and more accurate procedure. High quality stepper motors allows micro adjustments of just 1/40 of 1 degree to the beam head. Controlled by software, this finds and continually monitors its position in relation to the reflector. This ensures that you achieve perfect alignment every time and that your beam will keep that alignment.

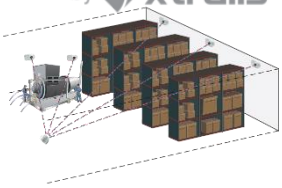
OSID by xtralis



OSID by Xtralis provides reliable, cost-effective smoke detection for open spaces where fire detection presents unique challenges and where very early warning is not always the priority.
Open-area Smoke Imaging Detection (OSID) is a new innovation in projected beam smoke detection technology. By using advanced dual wavelength projected beams and optical imaging technology for early warning smoke detection, OSID provides a low-cost, reliable and easy-to-install solution that overcomes typical beam detection issues such as false alarm incidents and alignment difficulties.

Osid can support up to 7 emitters with a maximum range of 150m per unit, connected to a single Imager making it easier to deploy in unusually shaped areas. Emitters can be placed at different heights to overcome stratification and provide earlier detection

Air Sampling

VESDA by Xtralis very early warning aspirating smoke detection solutions with continuous air sampling provide the earliest possible warning of an impending fire hazard. VESDA aspirating smoke detectors buy the critical time needed to investigate an alarm and initiate an appropriate response to prevent injury, property damage or business disruption.

Air Sampling

WAGNER's highly sensitive air sampling smoke detection systems offer early smoke detection in the pyrolysis phase along with graduated alarms. High response sensitivity, continuous air sampling, and a graded alarm-activation concept ensure early detection of smouldering and incipient fires, so that users have time to react to alarms appropriately.

ROOM IDENT TITANUS MICROSENS 1x 40m Pipe Run Max 5 Holes

TITANUS MICROSENS 1x 40m Pipe Run or 2x 25m "T'd" Max 8 Holes

WAGNER's smallest air sampling smoke detector, the TITANUS *MICRO·SENS*, is designed for small to medium-sized areas up to 400 m² in size. This economical air sampling smoke detector is ideal for use in hotel rooms, offices, and prison cells.

Part No.	Description	List Price
AD-99-0310	MicroSens Basic Unit	£926.00
AD-99-0350	MicroSens with Bar Graph	£1592.60
AD-10-1960	Air Filter Assembley c/w Filter Elements	£198.40

TITANUS PROSENS

The universal **TITANUS** ***PRO·SENS®*** is WAGNER's best-selling air sampling smoke detector. Depending on the situation, the one or two detector modules (each with a one-stage alarm) can be set to sensitivity levels as high as 0.015 % Lt/m on their primary alarms. The highly modular air sampling smoke detection system offers solutions for both simple and highly specialised areas of application.

Part No.	Description	List Price
AD-99-1955	ProSens 1 Silent (Normal Sensitivity c/w 0.10% Detector)	£2003.00
AD-99-1905	ProSens 2 (Normal/Normal Sensitivity c/w 0.015% & 0.10% Detectors)	£2188.60
AD-10-1960	Air Filter Assembley c/w Filter Elements	£198.40

TITANUS TOPSENS

TITANUS ***TOP·SENS®*** was developed to serve a wide range of applications with the highest specifications. The system has a 3-stage alarm system and a smoke level display in bar graph form. It can also be fitted with an Ethernet network card.
Also available in a cold storage version or in a silent version, which operates at noise levels as low as 23 dB (A).

Part No.	Description	List Price
AD-99-1510	TopSens (High Sensitivity c/w 0.015% Detector)	£4165.10
AD-99-1610	TopSens (Normal Sensitivity c/w 0.10% Detector)	£3235.68
AD-10-1710	TopSens (Low Sensitivity c/w 0.5% Detector)	£3031.58

TITANUS RACKSENS

Especially designed for EDP cabinets, server racks and control cabinets, **TITANUS** ***TRACK·SENS®*** presents an extremely cost-effective fire protection solution for 19"-cabinets and racks.

Part No.	Description	List Price

Power Supplies for Fire Systems

EN54-4 compliant power supplies are available with either 1.5 amp or 3.0 amp output and can be fitted with optional dual fused output monitoring modules. This ensures compliance with European standards when supplying fire control panels with an external power supply. An optional dual output path version is also available that provides two independent supply paths between the power supply unit and the control panel in accordance with EN54-4 clause 6.4 and BS5839 pt1, clause 12.2.2.m.

Door Retainers & Over Door Closers

These door retainers combine good looks, high performance and economy within variety of housings including a flame retardant, low profile ABS plastic body or metal housing. Installation is simple, with knockouts provided for entry of surface mount conduit and ample space to connect external wiring to the 4.0mm terminals.

Each door retainer is fitted with a spring loaded release pin mounted centrally within the electro-magnet. On power off, the release pin then ensures that the fire door is pushed away from the electro-magnet. Additional accessory products are available, including floor brackets, chains and additional keeper plates.

Linear Heat Cable

Signaline Linear Heat Detectors are specialist cables designed to sense heat or sudden increases in temperature anywhere along their entire length. They are designed to be used in commercial and industrial fire alarm systems where conventional or addressable heat detectors may be difficult to install, or may not be suitable.

SIGNALINE HEAT FIXED TEMPERATURE

Signalige FT, fixed temperature linear heat detector, triggers an alarm when the cable reaches a pre-determined temperature.
Signaline FT is UL and FM approved. (Minimum order quantity 50m)

Assist Call Systems

The "Assist Call" system is designed to provide a fully compliant and scalable solution to building owners with many unique benefits, including clear indication, acoustic and visual feedback and high quality stainless steel finishes to blend into all locations.
In simple systems where the accessible room is in a permanently staffed area a basic kit can be used. For simplicity all wiring is standard two core cable, and unlike other systems the wiring order of the devices is not fixed, allowing the designer total flexibility in the installation routes

Refuge Systems

The Sigtel range of refuge systems comprises of two wall-mounting master controllers, the ECU-4, and ECU-8 which can handle 4 and 8 lines respectively, and an eight line expansion unit, the ECU-8S. Typically located in a building's control room or fire services access point, the ECU-4 and ECU-8 allow management and/or the fire services to communicate via a telephone-style handset with the system's 'outstations'.
Two types of outstation are available (Type A and Type B). Type B outstations offer true hands-free duplex speech and allow anyone in a refuge area to communicate with building control at the touch of a button. Type A telephone-style outstations are designed for use in stadium marshalling systems and other emergency evacuation applications. Comprising a telephone handset in a push-to-open or key lockable red steel cabinet.

Loop Induction

Audio-frequency induction loop systems (AFILS) allow hearing impaired people to hear more clearly. Hearing aids with the 'T' or 'MT' switch are able to pick up the electromagnetic field generated by an induction loop system and this signal is converted into a sound suited to the user's hearing requirements. Any person with a suitable hearing aid positioned within or near the loop can hear the loop signal, allowing them to participate more easily in conversation, ordering goods or services, listening to public performances, etc.

Emergency Lighting

Emergency Lighting is a primary life safety system and is required, where necessary, to be provided in premises where people are employed in order to assist the occupants to evacuate in the event of an emergency. If artificial light is installed in a workplace then emergency lighting is a mandatory requirement. Emergency Lighting should cover the following aspects: General, Escape Route, Open Area (anti-panic), Standby Lighting, and High Risk Task Area lighting.

Our range of lighting has been selected to give a broad range of luminaires to cover most common applications, and with a range of spares to assist with on-going maintenance.
